EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Claims 1, 12 and 18 are amended as shown below. Claim 7 is canceled.

Claim 1 is amended to read as follows:

1. A data recording head for use in conjunction with a data recording medium, comprising:

- a body;
- a first waveguide supported by the body; and
- a second waveguide supported by the body and energy-coupled to the first waveguide,

wherein the first waveguide has a first side having a first width and the second waveguide has a second side having a second width, the first width and the second width being measured in a direction of the space between the first waveguide and the second waveguide, wherein the first width is larger than the second width,

wherein the first waveguide is configured to receive a propagated radiant energy directed from a source towards the first side,

wherein the second waveguide is adjacent to the first waveguide such that the space between the first waveguide and the second waveguide is

not aligned with the propagated radiant energy from the source, and
wherein the propagated radiant energy is propagated from the first
waveguide to the second waveguide across the space between the first
waveguide and second waveguide.

Claim 12 is amended to read as follows:

12. A data storage system, comprising:

a data recording medium;

a radiant energy source;

a data recording head, comprising:

a body,

a first waveguide supported by the body and coupled to receive a

propagated radiant energy from the radiant energy source, and

a second waveguide supported by the body and energy-coupled with the first

waveguide, the second waveguide directing radiant energy to the data

recording medium,

wherein the first waveguide and the second waveguide are separated by a

space,

wherein the first waveguide has a first side having a first width and the second

waveguide has a second side having a second width, the first width and the

second width being measured in a direction of the space between the first

waveguide and the second waveguide,

wherein the first waveguide is configured to receive the propagated radiant energy directed from the radiant energy source towards the first side, wherein the second waveguide is adjacent to the first waveguide such that the space between the first waveguide and the second waveguide is not aligned with the propagated radiant energy from the radiant energy source; wherein the propagated radiant energy is propagated from the first waveguide to the second waveguide across the space between the first waveguide and second waveguide; and an actuator supporting and positioning the data recording head with respect to the data recording medium to effect data recording.

Claim 18 is amended to read as follows:

18. A method of data recording, comprising the steps of:

providing a radiant energy source;

providing a data recording head comprising a first waveguide coupled to the radiant energy source, and a second waveguide energy-coupled to the first waveguide and configured to direct radiant energy to a data recording medium;

wherein the first waveguide and the second waveguide are separated by a space,

wherein the first waveguide has a first side having a first width and the

Art Unit: 2627

second waveguide has a second side having a second width, the first width and the second width being measured in a direction of the space between the first waveguide and the second waveguide, and

wherein the first width is larger than the second width,

wherein the first waveguide is configured to receive a propagated radiant energy directed from the radiant energy source towards the first side, and

wherein the second waveguide is adjacent to the first waveguide such that the space between the first waveguide and the second waveguide is not aligned with the propagated radiant energy from the radiant energy source,

wherein the propagated radiant energy is propagated from the first waveguide to the second waveguide across the space between the first waveguide and second waveguide;

directing radiant energy at a spot on the data recording medium; and recording data at a spot where radiant energy has been directed.

Authorization for this examiner's amendment was given in a telephone interview with Kirk Cesari on 9/19/2001.

Art Unit: 2627

Reasons for Allowance

The following is a statement of reasons for the indication of allowable subject matter:

Claims 1, 3-4, 6, 8-10, 12-19 and 21-24 are allowed over the prior art of record, because the prior art of record, including closest Patent Publications to Laurent-Lund et al (US 2006/0204175) and US Patents to Rottmayer et al (US 2003/0198146) and Matsushima et al (US 6937799), considered individually or in combination, fail to disclose or fairly teach a data recording head, a storage system and a method of recording with first and second waveguides such that the second waveguide is adjacent to the first waveguide such that the space between the first waveguide and the second waveguide is not aligned with the propagated radiant energy from the radiant energy source, wherein the propagated radiant energy is propagated from the first waveguide to the second waveguide across the space between the first waveguide and second waveguide in combination with the other limitations of the claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to TAWFIK GOMA whose telephone number is (571)272-4206.

The examiner can normally be reached on 8:30 am - 5:00 pm.
